Framework:- React, TailwindCSS, Bootstrap, Redux

Tools:- RestAPI, Github

CERTIFICATES

-
- Infosys Python Certificate
 - Hackerrank SQL(Basic) Certificate

PROJECTS

College Event Management Website (2023)

Developed a website to address the lack of event information and coordination among college event committees. The website enables event committees to list upcoming and ongoing events, providing detailed information such as event schedules, venues, descriptions, and registration links. The website was built using HTML, CSS, and JavaScript, ensuring a responsive and user-friendly experience. The website also enables event organizers to update and manage their events easily.

Myntra Website Clone(Homepage) (2023)

Developed a clone of the Myntra e-commerce website, replicating the core features and user interface to provide an online shopping experience. Built the homepage of myntra using HTML, CSS, and JavaScript for the front-end development. The homepage includes a navigation bar with categories like men, women, kids, and offers, and a prominent search bar for quick product searches. Implemented a product carousel showcasing popular items and new arrivals.

Portfolio Website (2024)

This portfolio website showcases my skills, projects, and achievements as a web developer. Built with HTML, CSS, and React, it features a responsive design, dynamic project display, and interactive navigation. The site highlights my expertise in front-end development and React-based applications.
